## FB-A FUEL FIRED STEAM BOILER

The design feature for the standard model from FBA-015 to FBA 060 and FBB-015 to FBB 060 is a vertical tubeless boiler. With no tubes or coils to scale up, rust or burn out, this design reduces plant operating costs by eliminating downtime and expensive repairs. The boiler features top mounted, down fired power burner, for over 50 years, this standard model has a reputation for years of trouble-free operation. It is the No. 1 choice for the process industry.

The standard model from FBA-090 to FBA-150 and FBB-090 to FBB-150 is a vertical multi-port wet back design boiler. It speeds up boiler start up time and creates overall even heating throughout. The other design feature is the "ribboned" turbulators that extend the full length inside each flue pipe. The top Mounted down-fired burner is an air pre-heat design enhances the boiler efficiency.

Stainless steel jacket is available for option for both FBA and FBB series.

## FB-C FUEL FIRED STEAM BOILER

FB-C/FB-D Boiler is designed and manufactured to comply with ASME code and Chinese Boiler Standard, with standard maximum working pressure of 1.0 MPa (150PSI) or 1.25 MPa (185PSI). The standard model is three pass, wet back, and corrugated furnace. The factory also supplies 4-pass, wet back corrugated furnace boiler or higher pressure boiler upon customer's request.

FB-C/FB-D boiler is equipped with high efficient industrial Combustion burner. This quality forced draft burner has a reputation for long life, trouble-free performance and high efficient operation. Full modulation provides optimum performance to meet varying load demand. Multi-fuel versatility is available by just the flip of a switch to select between gas or oil on combination burners. For oil fuel, the burner utilizes low pressure air atomizing design for proper oil atomization, maximum combustion efficiency and low maintenance. For gas fuel, multi-port burner design for high gas velocities and complete fuel/air mixing provide combustion efficiency. Microprocessor based burner control provides high level of safety, reliability, functional capacity and features beyond those of conventional controls to perform automatic burner sequencing, system status function, system or self diagnostics and trouble shooting.
